1.	. This opinion contains indications relating to the following items:			
	X Box No. I Basis of the opinion			
		Box No. II	Priority	
	X	Box No. III	Non-establishment of opinion with regard to novelty, inventive step and industrial applicability	
		Box No. IV	Lack of unity of invention	
	X	Box No. V	Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability;	
		Box No. VI	Certain documents cited	
		Box No. VII	Certain defects in the international application	
ł	X		Certain observations on the international application	

FURTHER ACTION

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1 bis(b) that written opinions of this International

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

3. For further details, see notes to Form PCT/ISA/220.

PCT/AU2005/000022

Box No. V	Reasoned statement ur applicability; citations	nder Rule 43 <i>bis</i> .1(a)(i) with regard to no and explanations supporting such state	velty, inventive step or industrial ment
1. Statement			
No	ovelty (N)	Claims	YES
		Claims 1-9	NO
Inv	ventive step (IS)	Claims	YES
		Claims 1-9	NO
Ind	dustrial applicability (IA)	Claims 1-9	YES
		Claims	NO

Citations and explanations:

The following documents were cited in the International Search Report:

D1 – WO 2003/099811

D2 - WO 2001/000213

NOVELTY (N) and INVENTIVE STEP (IS)

Both of the above documents D1 and D2 disclose compounds that overlap with the compounds defined in the present claims. They also disclose pharmaceutical compositions containing these compounds and their use in the treatment of immunosuppressive diseases.

Document D1 discloses a range of compounds wherein substituent group A of the present formula I is pyrazine. There is significant overlap between the compounds disclosed in document D1 when substituent D of document D1 is the first mentioned option and R2 is NR3COR4, C₁₋₄alkylNR3COR4, NR3SO₂R4 and C₁. ₄alkylNR3SO₂R4. For example, the compounds of examples 107, 108 and 193 fall within the scope of the present claims. Accordingly claims 1-9 are considered to lack novelty and inventive step in light of document D1.

Document D2 discloses a range of compounds wherein substituent group A of the present formula I is pyrimidine. There is significant overlap between the compounds disclosed in this document and those of the present claims, particularly when the R⁶ and R^{6a} substituents of document D2 are groups (i), (k), (p), (s), (ab) and (aj) (see pages 7-8). For example, the compounds of examples 82, 83, 85-92, 111, 112, 130-135, 138, 139, 143-151, 167-170 and 175-181 fall within the scope of the present claims. Thus claims 1-9 are also considered to lack novelty and inventive step in light of document D2.

INDUSTRIAL APPLICABILITY (IA)

Claims 1-9 are considered to possess industrial applicability.

International application No.

PCT/AU2005/000022

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

- (i) Claims 1 and 2 are not fully supported by the description because they include compounds which have not been exemplified and which could differ significantly in structure from the compounds that have been made. As a consequence of these significant structural differences, it is considered that some of the compounds falling within the scope of the above claims represent an unreasonable extrapolation from what has been exemplified in the description. In particular, the examples do not contain any instances wherein substituent A is the last 3 heterocyclic moieties of claims 1 and 2. In addition, many of the substituents defined for the variable Z have also not been exemplified the examples appear to only exemplify compounds wherein a nitrogen atom is the first atom in substituent Z. Thus it is considered that a significant proportion of the claimed compounds are not represented in the examples and that the compounds of claims 1 and 2 constitute an unreasonable extrapolation from what has been done.
- (ii) Claim 3 is not fully supported by the description because it includes compounds that do not fall within the scope of claims 1 and 2 and because it also includes several compounds that have not been described in the description. For example, the 3rd compound at page 75, last line, the 3rd compound at page 76, 4th line, the 4th compound at page 76 6th line, the 2nd compound at page 77, 2nd line and the 4th compound at page 77 6th line would all seem to be outside the scope of claim 1. Furthermore, claim 3 also includes compounds wherein R9 is outside the scope of compounds defined in claim 1. For example, the compounds at page 75, last line, 3rd compound and page 76, 1st line, last compound appear to have a pyridine ring directly attached as substituent R9, but R9 and R10 can only be C₁₋₄alkylhetaryl as defined in claim 1.

In addition, claim 3 includes several compounds that have not been specifically described or exemplified in the description – the 1st and 4th compounds at page 75 line 3 are examples of such compounds.
